RETAIL PRICE LIST OF Rare Cacti and Succulents

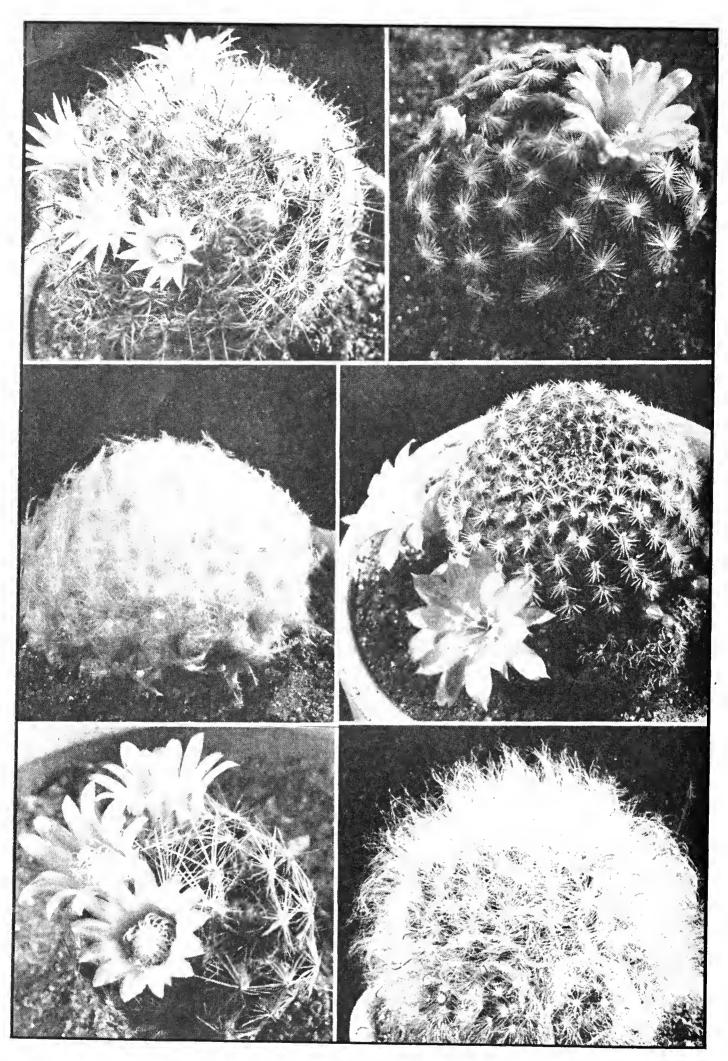

Cephalocereus senilis ''Old Man'' Pilocereus dautwitzii Espostoa lanata

WRIGHT M. PIERCE

313 WEST 3RD ST. CLAREMONT, CAL. PHONE 4252

Boulevard (U. S. 66) to Claremont, turn south at High School on Indian Hill Boulevard to Third Street, then one block to your left.

LESS THAN 1 HOUR FROM DOWNTOWN LOS ANGELES

SIX SPECIMEN CACTI

Neomammillaria longicoma Neomammillaria plumosa Neomammillaria viereckii

Neomammillaria schiedeana Rebutia miniscula Neomammillaria bocasana

Conserve Our Deserts by Planting Hand Raised Acclimated Seedlings

NEOMAMMILLARIA GROUP

25c plants

andreae—large tubercules, attractive caput-medusae—beautiful decipiens—clusters, ever-flowering discolor elongata stella aurata—bright golden yellow spines gummifera longicoma—hairy magnimamma mystax uncinata—hooked spined

30c plants

carrettii chinocephala coronaria crucigera dolichocentra-red blossoms donatii—beautiful white plant erecta—yellow green elegans—red flowers, attractive fortispina-long-spined galeottii georgii knebelliana multiceps—compact clusters, many flowers parkinsonii—recurved, long, central spines plumosa—spines like feathers, "feather ball" polythele-red flowers, pretty radians rosea alba

35c plants

bocasana—beautiful hairy type, many flowers durispina nivea-snow-like, axils full of wool pachythele-attractive, large, showy flowers phaecantha-red blossoms, nice pseudocrucigera pseudoperbella pygmeae-dwarf, many flowers robustispina—uncommon trohartii zeyeriana zuccariniana

40c plants

bogotensis—green, with axils full of wool camptrotricha—fine, yellow, "bird's-nest cactus" candida—white carnea

cephalophora-dwarf, fine yellow hair and large blossoms densispina-yellow, red-tinted spines; a lewel elongata echinata—giant lace cactus gigantea klissingiana kunzeana-red, hooked spines lanata mainae-yellow, hooked spines melanocentra microhelia-a dandy Neomammillaria, one of the most admired muhlbaueriana ochoterinae-new, attractive palida schiedeana-dwarf, beautiful white and yellow spines sempervivi solisii—fast-growing rarity viereckii—blossoms luxuriantly zephranthoides—a dream

50c plants

baumii—fine hairs, very pretty compressa—forms large clusters hahniana—covered with fine silky hairs kewensis microthele nivosa—yellow, covered with white wool longimamma—large, yellow blossoms; showy plant spinosissima—one of the best

60c plants

polygona—exceedingly long-spined rhodantha ruber—fast growing, nice rhodantha chrysacantha—easy to grow, pretty zeilmanniana—very fine, with rose blossoms wilcoxii—long, brilliant red, hooked spines; a fine one

75c plants

horripila—wonderful pink flowers lenta—rare polyedra villifera—fast growing; a beauty

\$1.00 plants

albicans—fine-spined, almost white; not common

celsiana—golden yellow spines; most attractive

geminispina—makes large clusters

praelii—a round plant covered with hair and wool in the axils; very beautiful

Let Us Help You in Planning Your Cacti and Succulent Gardens

CEREUS GROUP

25c plants

acanthurus bolivianus candicans--yellow-spined, hardy chosiquensis-beautiful yellow and brownspined, from South America chrysomallus-fine cochal—pretty deficiens-beautiful gray green dumortieri exerens giganteus-state flower of Arizona melanotrichus palmeri—hairy top pasacana albicephala—attractive peruvianus-good grafting stock pruinosus queretaroensis—nice senilis—true "Old Man" from Mexico serpentinus spachianus terscheckii validus-novelty from South America weberi

30c plants

bridgesii—extremely hardy fascicularis geometrizans—light blue; very attractive marginatus—the pipe organ melanostele—bright yellow, fine-spined griseus—gray green huasha—large yellow blossoms; fine peruvianus monstrosus—odd and interesting schottii stellatus thelogonides

35c plants

fossulatus—rare; from South America macrocephalus ocomponis—clusters strigosus—fine, yellow - red spined; attractive

40c plants

erythrocephalus hoppenstedtii poco—new; from South America pringlei russelianus trollii—hairy; one of the best

50c plants

celsianus—long white hair; very desirable dautwitzii—fine, silky white hair all over; from high in the Andes houlettii—hairy and beautiful huasha ruber—red-flowered; rare strausii—another beautiful, hairy species from the Andes usitatus—deep blue; very striking werdermannianus—new, rare.

75c plants

gounellii—new, hairy; from South America irigoyenii—thick mat of fine white hair all over plant body

monvilleanus—yellow-spined

polylophus—beautiful green, many-ribbed; desirable

ECHINOCACTUS GROUP

Many of these have the most wonderful of any of the flowers of the cacti group.

25c plants

asterias—"Sea Urchin," unusual corniger—red barrel grandis—gray barrel grusonii—golden barrel helophorus—purple barrel ingens—dark gray-green; pretty latispinus melocactiformis—wierd pilosus recurvus—attractive setispinus—many-flowered

35c plants

longihamatus ornatum—"Horned Bishop's Cap" robustus strausianus

40c plants

delaetii floricomus—rare; South America mamulosus—rarity from South America myriostigma—"Bishop's Cap" ottonis—large yellow blossoms schickendantzii—attractive

Package of Mixed Cacti Seed 25c

ECHINOCACTUS GROUP—Continued

50c plants

capricorne

damsii—rare

denudatus-very desirable

loricatus—beautiful

lloydii

miniscula—pretty green plant with bloodred flowers

tabularis-another South American gem

submammulosus—long-spined, large flowers

vaupelianus

60c plants

gibbosus violaciflorus—attractive

75c plants

haselbergii, hertrichiana, and scopa, allrare and beautiful

\$1.00 plants

- chrysacanthion—rare, like spun gold in color
- lenninghausii—yellow and brown-spined; very attractive

maasii—rare, hooked spines from South America

ECHINOPSIS, LOBIVIA GROUP

ancistrophora—hooked spined, fine	\$.50
aurea—golden yellow flowers	1.50
bridgesii	.40
chionantha	.60
ferox—long-spined	.50
formosa—yellow blossoms, long-spined; very desirable	.35
houtii	.25
longispina	.50
saltensis—beautiful	1.00
schickendantzii	.25
thionantha	.60

- ECHINOCEREUS—knippelianus, 50c; scopolorum, 30c; munzei, 50c.
- OPUNTIAS—Send for list of large number of rare, fine species.
- PHYLOCACTI—Cuttings of unnamed hybrids and species, about 20 different kinds, 30c each. Color of flowers: Red, rose, pink, yellow, purple and white.

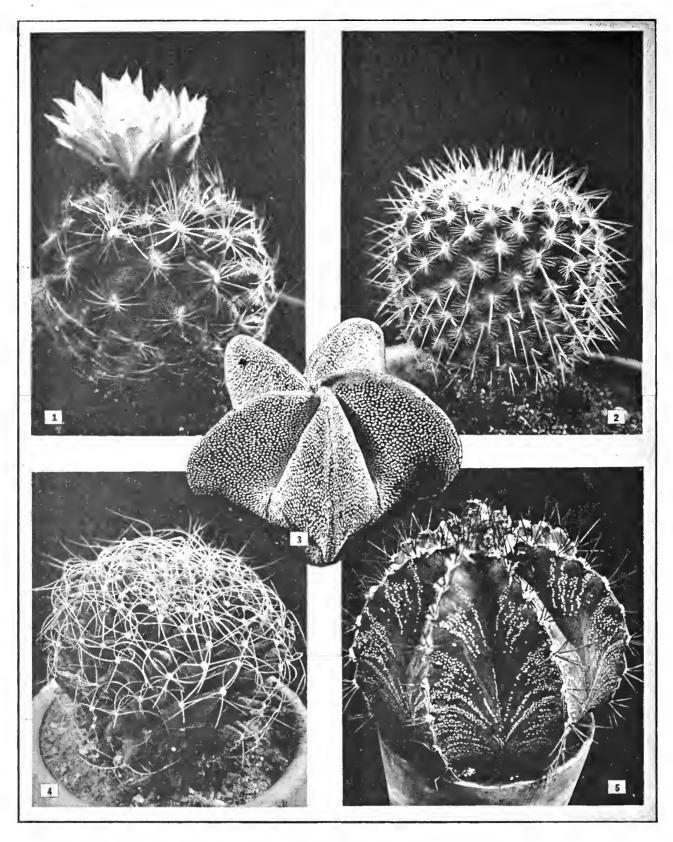

ALOE-Variegata, 20c to \$5.00.

- Many desirable other succulents. Write for what you want, or, better, drive out and see the gardens. Four large houses and outside plantings.
- Collections, named, my selection, prepaid U. S. A. Mexican and South American species only:

We Have Larger Specimens of Nearly All Listed at a Higher Price

FIVE BEAUTIFUL CACTI

(1) Neolloydia horripila, (2) Neomammillaria parkinsonii, (3) Astrophytum myriostigma, (4), Neomammillaria comptrotricha, (5) Astrophytum ornatum

First Prize Plants Wherever Exhibited

CACTUS CULTURE

"After you purchase your rare plants, learn how to care for them."

So much has been written in regard to the care of cacti that it would seem unnecessary to say more, however, there are a few cultural hints that I wish to stress, after many years experience with these most fascinating plants. If I repeat what has already been published it is because I do not wish you to lose those choice specimens.

There are hardy species that will thrive when planted out in almost any climate. There are others, some of the most attractive, that must be grown inside, but under no circumstances, no matter how suitable the conditions, would I advise planting any seedlings outside before they have reached a fair size. Also, when transplanting from inside to outside, always protect the plants from the strong sun for a few weeks until they become hardened.

Now for the soil; for Cerei, Neomammillarias, and Echinocacti use a porous soil composed of sharp, clean, sand; garden loam; and leaf mould. If possible add some hydrated lime or, better, old plaster. Also a goodly portion of decomposed granite is advisable. Now even though many of the other succulents thrive in this mixture too, I think that, with a few exceptions, it is best to keep these plants in separate beds.

In nearly all cases it seems that cacti, especially during the summer, like a partially shaded bed better than one in full glaring sunlight. An ideal condition would be to use deciduous shrubs or trees which would give summer shade and allow the winter sun.

Since good drainage is essential for successful results, raised beds are by far the best. Now it seems that nearly all cacti like considerable moisture, much more than is ordinarilly supposed. But here is the catch. Never water when the weather is cold, never permit the plants to be soaking wet for any length of time, but keep them moist during warm weather and especially while the plants are growing. I feel that more cacti plants are lost in cultivation because of lack of water rather than because of too much.

When transplanting it is always better to trim back the roots, especially removing the long, "string-like" ones, which would probably die anyway. If at any time the roots rot, cut them off, well back toward the base of the rootstalk, thoroughly dry the plant, and then re-root in moist sand. You will be surprised how quickly a fine, complete, new root system will grow, if the plants are kept in a warm place.

Thus far, I have been speaking only about Cerei, Neomammillarias, and Echinocacti; Epiphyllums, for instance, need distinctly different culture-more moisture, and a richer soil, while Opuntias seem to thrive in almost any soil. The other succulents need various methods of carc. Mesembrianthemums, here in Southern California seem to do better if kept dry in summer and moist during their growing period, winter. Aloes and Agaves enjoy the same soil and water conditions as Cerei, Echinocacti, and Neomammillarias, and many very effective plantings of these groups together, are seen here in the outdoor gardens of the Southwest. For their winter blossoms add very effective color to the background of any gardens during this usually blossomless season.

No plants ean look, or be their best if infested with scale. There are two types, the circular, flat, tight sticking one which has a brown center. With a heavy infestation of this, the plant has a frosty appearance. This attacks all groups of cacti. There is a highly refined, good, oil spray which, used in the later afternoon, seems to keep this scamp under control. Then there is our old friend or rather enemy-Eriococcus coccineus, called "spiny mealy" by some. This is a bad pest and difficult to control and to kill, because of its waxy covering. Insect sprays must be used in very strong solution-so be cautious that you use one that will not burn your specimens.

Pest Control—Guaranteed Results

READ CAREFULLY

All prices are net retail for plants F. O. B. Claremont, excepting that all special collection offers and all orders over \$4.00 are sent prepaid, U. S. A. Prices are subject to change and plants are offered subject to prior sale. These are beautiful, clean, well-hardened, selected specimens, chosen from a stock of from 30,000 to 50,000 plants of over 600 species. California customers please add $2\frac{1}{2}$ per cent sales tax. In ordering it is always best to list a few extra plants as I can not be sure of having everything listed in stock at all times, especially since some of these offered are in limited numbers. If you desire species not listed, write me as I have many in small quantities not listed.

Fine photographs of many cacti and desert scenes for sale.

Subscriptions taken for the Journal of The Cactus and Succulent Society of America, and Desert Plant Life. Samples of each sent on request.

Wholesale rates to dealers. Write for discounts.

A cordial invitation is extended to all to visit these show gardens of rare cacti and succullents at 313 West Third Street, Claremont.

One of the finest displays of Mexican and South American cacti in the West.

Please Note—This Garden is Closed from July 1st to September 15th
